

# Shareholder Product Overview

A business operating system for SMBs: issue documents, manage relationships, collect payment, see cash performance, and grow — in one coherent platform.

**Product** paidly.co.za    **Focus** South Africa—first    **Status** July 2026    **Audience** Shareholders & advisors · Confidential

## 1. WHAT PAIDLY IS

Paidly is **not** a narrow invoicing app. It is a **financial workflow platform** for small and medium businesses: one place to issue commercial documents, manage clients and catalog, collect payment, see cash performance, and grow through channels such as affiliates.

**Mission:** Help businesses get paid faster by reducing friction between sending a document and receiving money.

**Investor framing:** From “another invoice PDF tool” to owning the **money loop** — Document → Payment Intent → Settlement → Intelligence.

## 2. THE PROBLEM WE SOLVE

| Typical tool              | Gap                                                            |
|---------------------------|----------------------------------------------------------------|
| Invoicing-only            | Weak relationships, weak cash intelligence, bolted-on payments |
| Accounting-only           | Heavy; slow path from “quote sent” to “money in”               |
| Standalone CRM / referral | Disconnected from documents and payment state                  |

**Paidly’s edge:** unify issuance, relationships/catalog, revenue/ops, and payment intelligence under one architecture — so the business runs in one system, not five tabs.

## 3. HOW THE PRODUCT OPERATES

### Day-to-day for owners

1. Add clients and catalog
2. Create branded invoices, quotes, payslips
3. Send via email or shareable link; track views
4. Collect payment (PayFast); record partials

- 5. Use dashboard, cash flow, and reports
- 6. Grow via affiliates and team workspaces

Architecture maturity

Roughly ~70% of the SaaS operating system is in place. The remaining ~30% that defines long-term defensibility: payment abstraction at scale, unified document event intelligence, and experience consistency across every money surface.

4. CORE PRODUCT SYSTEMS

| System               | Job                                        | Shareholder takeaway                 |
|----------------------|--------------------------------------------|--------------------------------------|
| Identity             | Auth, orgs, roles, secure tenancy          | Multi-user, company-ready foundation |
| Document Engine      | Invoices, quotes, payslips                 | Shared compose → send → PDF → track  |
| Relationship         | Clients + catalog                          | CRM + SKU as input to commerce       |
| Payment Intent       | Handoff to payment rails                   | Multi-provider readiness             |
| Revenue & Ops        | Payments, cash, reports, SaaS billing, POS | Cash visibility + tenant billing     |
| Payment Intelligence | Reminders & Get Paid triggers              | Collection velocity differentiator   |
| Experience           | Consistent UI & money CTAs                 | One premium product feel             |
| Growth               | Affiliates, email, notifications           | Acquisition & retention loops        |

5. WHAT HAS BEEN BUILT

Commercial documents

| Capability                                               | Status   |
|----------------------------------------------------------|----------|
| Invoices — create, edit, draft/send, view, PDF, branding | Shipped  |
| Recurring invoices — pause/resume, cycle tracking        | Shipped  |
| Quotes — templates, public view, PDF                     | Shipped  |
| Payslips — create, share, PDF                            | Shipped  |
| Unified document patterns (shared list/export)           | Advanced |
| Public share links + send/delivery tracking              | Shipped  |
| Partial payments, tax/VAT, multi-currency                | Shipped  |

Relationships, money & growth

| Capability                                                  | Status   |
|-------------------------------------------------------------|----------|
| Clients CRM, search/CSV, client portal, team invites        | Shipped  |
| Services / catalog & inventory surfaces                     | Shipped  |
| PayFast payment flows (return, cancel, ITN)                 | Shipped  |
| SaaS subscription billing v2 (verified ITN, plans, history) | Advanced |
| Cash flow, reports, dashboard KPIs                          | Shipped  |
| POS integrations (Yoco / Square)                            | Advanced |
| Affiliate program + platform admin                          | Shipped  |
| Security (RLS), session recovery, rate limits, CI guards    | Advanced |

## 6. HOW THE TECHNOLOGY WORKS

| Layer           | What it is                                   | Why it matters                                              |
|-----------------|----------------------------------------------|-------------------------------------------------------------|
| Web app         | React SPA on Vercel                          | Fast iteration, modern UX                                   |
| Database & auth | Supabase (Postgres, Auth, Storage, Realtime) | Secure multi-tenant data                                    |
| Serverless APIs | Vercel /api/*                                | Payments, email, shares, crons — secrets server-side        |
| Payments        | PayFast                                      | SA rail; billing verified server-side (never trust browser) |
| Email           | Resend / SMTP                                | Document delivery & transactional mail                      |

## 7. COMPETITIVE NARRATIVE

**Old lens:** “We have invoices, quotes, clients...”

**New lens:** One Document Engine, one money loop, one Get Paid intelligence layer.

Competitors typically win one vertical. Paidly’s thesis is **workflow ownership**: issue → know who bought what → collect safely → remind intelligently → grow via affiliates → operate the company with roles and subscriptions.

That stack is the **defensible story** for shareholders: not feature count, but **system coherence**.

## 8. NEAR-TERM PRIORITIES

1. **Deepen Document Engine unification** — one compose/send/PDF model across document kinds
2. **Client Timeline** — full history per client
3. **Quote → accepted → draft invoice** — close the sales-to-AR loop
4. **First-class Payment Intent** — multi-provider path + consistent Pay / Retry / Receipt UX
5. **Payment Intelligence v1** — e.g. viewed 3x unpaid → reminder + follow-up
6. **Foundation (parallel)** — auth/session hardening + UI layout standardization

## 9. BUSINESS MODEL

- SaaS subscription; plans catalog-driven (not hardcoded in UI)
- Subscriptions activate only after **verified** PayFast ITN — frontend cannot fake “paid”
- Append-only payment history and event timeline for auditability

- Affiliate channel for acquisition without a separate growth product

## 10. ONE-PAGE BOARD SUMMARY

| Question              | Answer                                                                                                           |
|-----------------------|------------------------------------------------------------------------------------------------------------------|
| What is it?           | SMB business OS for documents, relationships, payments, and growth                                               |
| Where?                | South Africa—first; live at paidly.co.za                                                                         |
| Who uses it?          | SMBs, freelancers, teams with company workspaces                                                                 |
| What’s shipped?       | Invoices, quotes, payslips, clients, catalog, PayFast, cash/reports, affiliates, admin, portal, billing plumbing |
| What’s left for moat? | Payment abstraction, document event intelligence, quote→invoice, experience consistency                          |
| Tech posture?         | Vercel + Supabase + PayFast; security-first billing; multi-tenant RLS                                            |
| Ask of shareholders?  | Align on workflow-platform narrative; complete Get Paid / Payment Intent layer                                   |

Prepared from the Paidly Application Blueprint and current product surfaces (July 2026). Engineering docs remain source of truth for implementation detail; this overview is the shareable narrative layer. Source: docs/Paidly-Shareholder-Overview.md · Print companion: this HTML.
